Ingest, cull and caption, the Getty way.

Everything you need to go from memory card to captioned, credited photos without Photo Mechanic: step by step, with the codes we all share.

1 Install and start

MAC & WINDOWS

On a Mac

1. Unzip **Caption Images.zip** and move the whole **Caption Images** folder where you want it (Documents is fine). Keep everything in it together: the app, **Code Replacements**, **Metadata Templates** and **Tags.txt**.
2. Double-click **Caption Images**. The first time, macOS may say it can't check the app. Click **Done**, open **System Settings** → **Privacy & Security**, scroll down and click **Open Anyway**.
3. If it asks to install **Command Line Tools**, click Install and wait. That gives the app what it needs to run.
4. When it asks to use files in Documents, iCloud Drive or on a card, click **Allow**.

On Windows

1. Install Python from **python.org/downloads**. On the first screen, tick **Add Python to PATH**.
2. Unzip **Caption Images.zip** and double-click **Caption Images (Windows).bat**.
3. The first time, a black window says *Setting up Caption Images* for about a minute while it adds the photo tools. Be online for that.

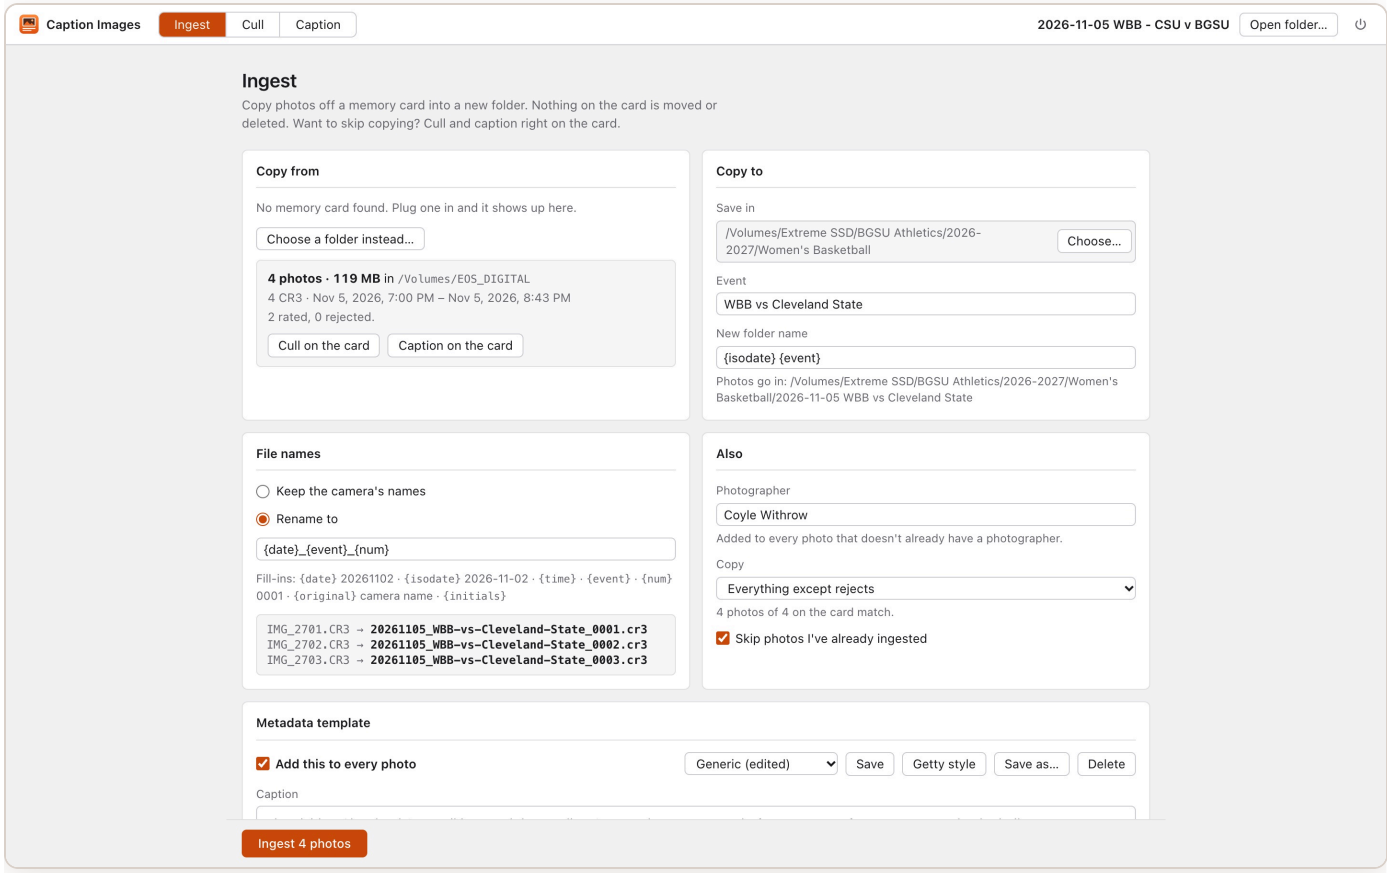

> **HEADS UP**
> The Windows version hasn't been tried on a real PC yet. If something looks wrong, tell Coyle. The jersey-number reader only works on a Mac.

Every time

- **Type your name** in the Photographer box (Ingest or Caption tab). It goes on every photo you ingest or caption and into the copyright and credit lines.
- The three tabs go in order: **Ingest** → **Cull** → **Caption**. **Open folder…** (top right) opens any folder of photos.
- **To quit**, click the power button at the top right. If a banner says *Caption Images was updated while it was open*, click **Quit now** and open it again.

> **GOOD TO KNOW**
> Nothing is ever deleted. Ingest copies off the card and leaves it untouched. "Move rejects" moves rejected photos into a Rejects folder. Stars and captions are saved in the photos themselves, so Lightroom and Photo Mechanic see them. Tags and color classes use Photo Mechanic's own fields.

2 Ingest a card

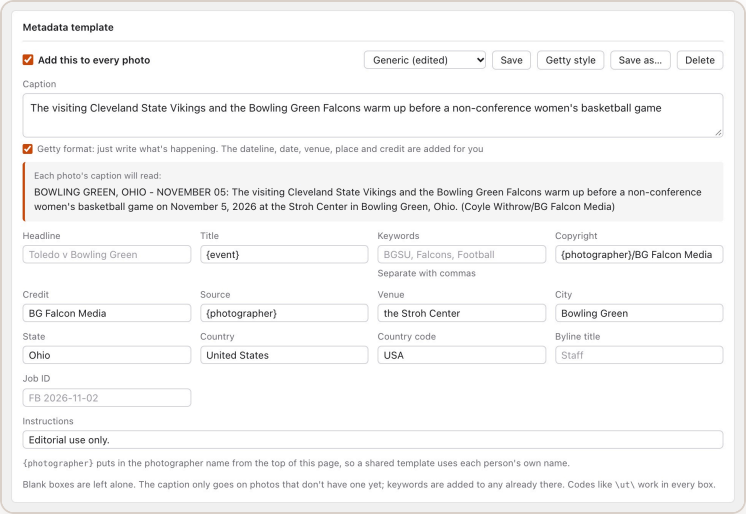

The Ingest tab: card on the left, destination and file names in the middle, options on the right.

1. **Plug in the card.** It appears under **Copy from** on its own (or click **Choose a folder instead…**). The app shows how many photos, the time span and how many you starred in camera.
2. **Save in**: choose the drive or folder for the shoot, then type the **Event** (WBB vs Cleveland State). A new folder is made, like *2026-11-05 WBB vs Cleveland State*.
3. **File names**: keep the camera's names, or rename with `{date}_{event}_{num}`. The preview shows exactly what you'll get. RAW+JPEG pairs keep the same number.
4. **Copy**: every photo, everything except rejects, or only photos rated ★ or more. Stars you gave **in the camera** count.
5. Leave **Skip photos I've already ingested** on. You can ingest the same card again after shooting more and only the new photos copy.
6. Fill in the **Metadata template** (next page), then click **Ingest**. When it's done, click **Cull these photos**.

SHOOTING ON A CARD ALL GAME?

You can cull and caption right on the card (**Cull on the card**) and ingest only your picks afterwards. Ratings and captions come along.

3 Metadata template

Generic template with Getty format on. The preview uses the card's date and your name.

1. Tick **Add this to every photo** and pick **Generic** from the menu (it comes with the app).
2. Type the **Venue** the way it reads in a caption: *the Stroh Center*.
3. In **Caption**, write only what's happening. Keep **Getty format** ticked. The app adds the dateline in front and the date, venue, city and your credit at the end, using each photo's own date.
4. The orange box shows exactly how every caption will read.

What Generic fills in

Copyright	`{photographer}/BG Falcon Media` → Coyle Withrow/BG Falcon Media
Credit	BG Falcon Media
Source	`{photographer}` → your name
Title	`{event}` → the event you typed on the Ingest page
City · State · Country	Bowling Green · Ohio · United States (USA)
Instructions	Editorial use only.

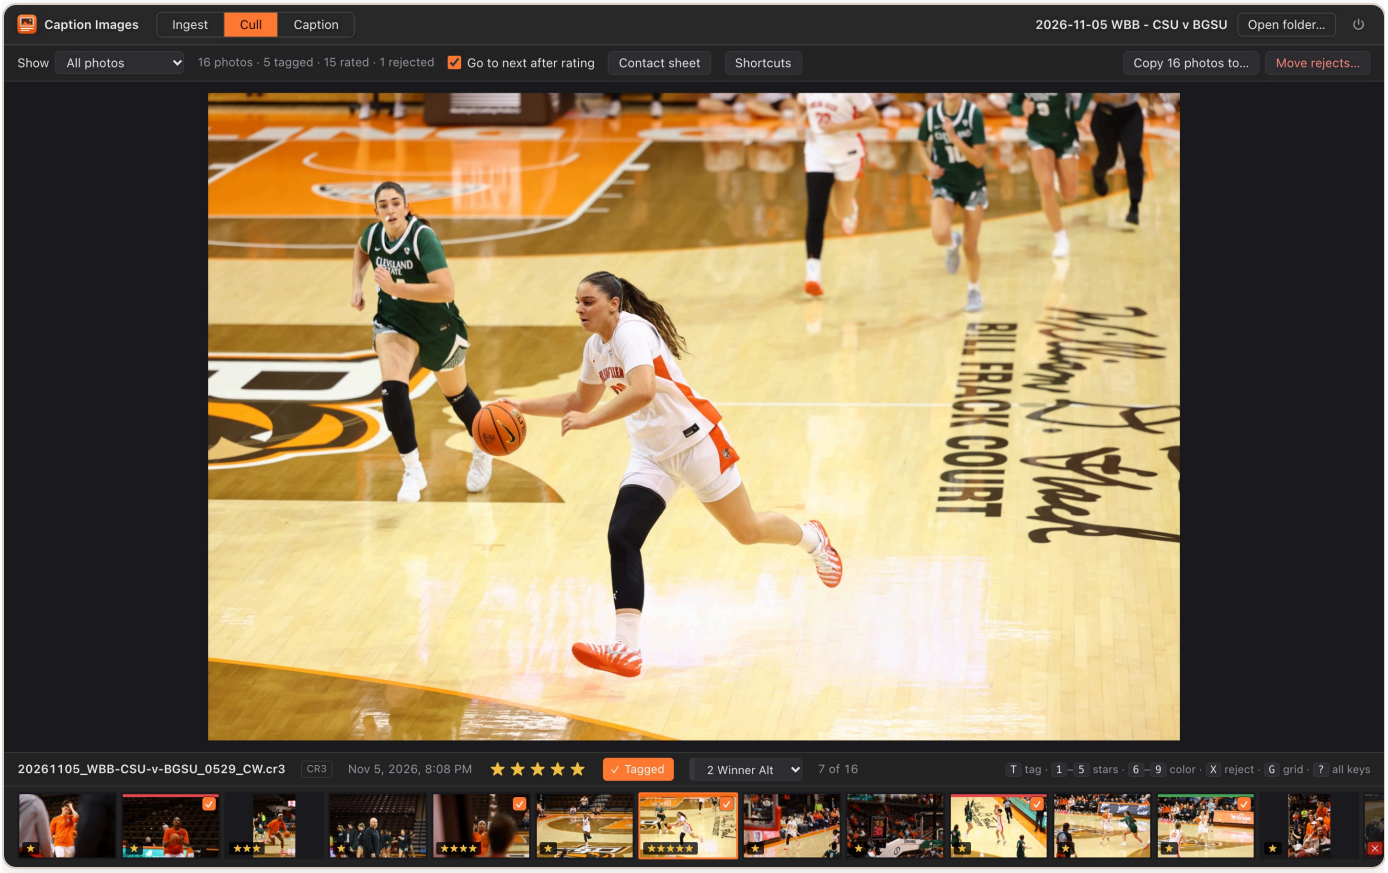

YOUR OWN TEMPLATES

Change the boxes and click **Save as…** to keep a template for a beat or a sport (e.g. *Volleyball home*). Saved templates are files in the **Metadata Templates** folder: send someone the .json file and they drop it into theirs.

The caption only goes on photos that don't have one yet, so a caption you wrote on the card stays. Keywords are added to any already there. Codes like \ut\ work in every box.

4 Cull like Photo Mechanic

TAG · STARS · COLORS

Cull: one big photo, the filmstrip below, and the info bar with stars, the Tag button and the color class.

The keys you'll use most

← →	Previous / next photo
T	Tag or untag (Photo Mechanic's tag)
1 – 5	Star rating (moves to the next photo)
0	Clear the stars
6 – 9	Color class: Winner, Winner Alt, Superior, Superior Alt
X	Reject (press again to undo)
Z Space	Zoom to 100% and back
G	Contact sheet / one photo
?	Every shortcut

Choosing what number keys do

Press ? and pick **Number keys set**. The three choices are Photo Mechanic's own keyboard presets:

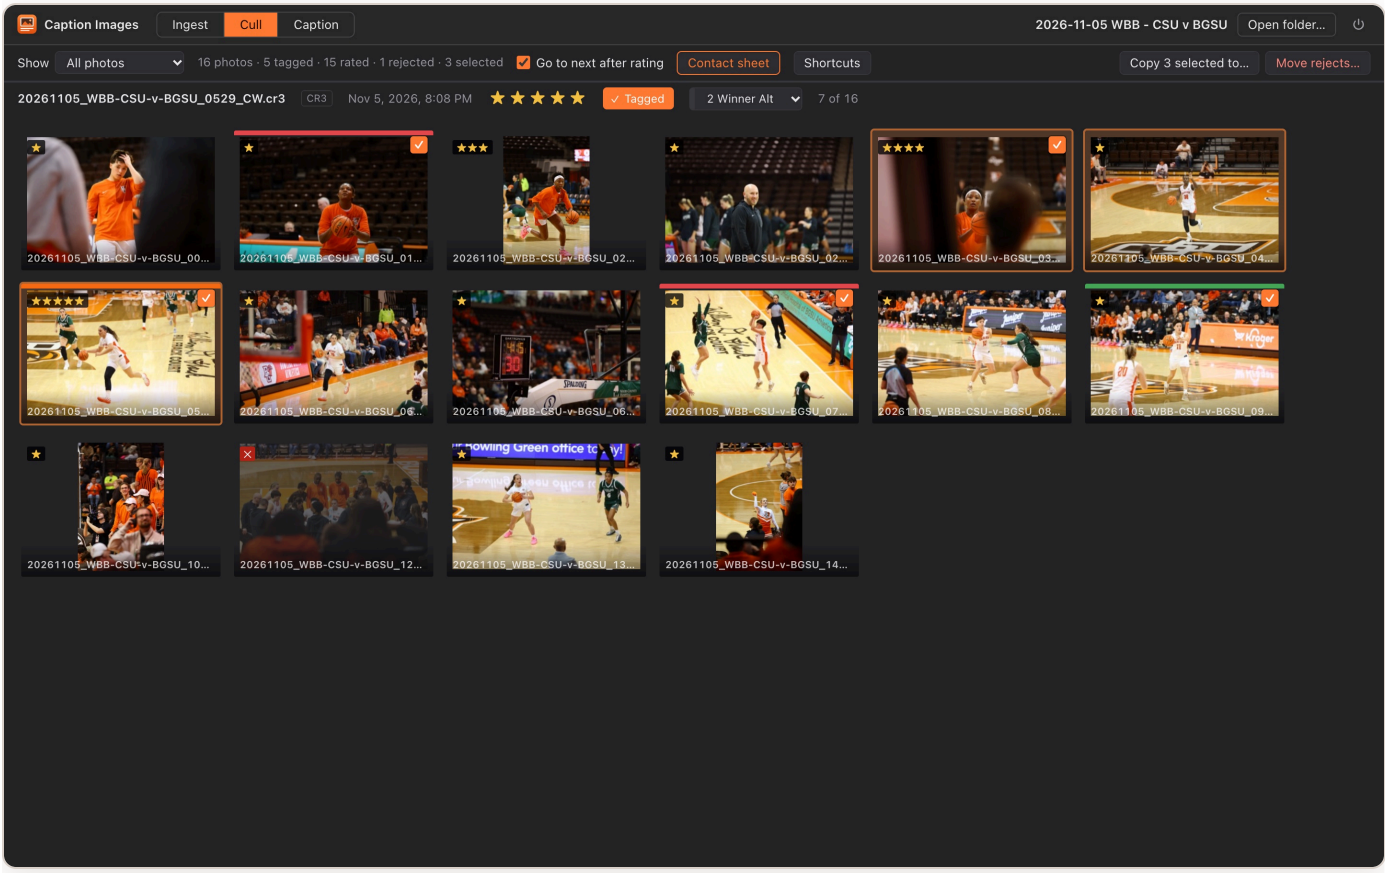

HERE	PHOTO MECHANIC PRESET
1–5 stars, 6–9 colors	*Lightroom Classic* (default)
1–5 stars only	*Numbers set Star Ratings*
1–8 color classes	*Numbers set Color Classes*

PREVIEWS

The big photo is a sharp 2000 px preview, the size that goes on the website. It shows the camera's quick preview first and sharpens a moment later. Press Z to check focus at 100%.

4 Contact sheet & selecting

WORK ON MANY AT ONCE

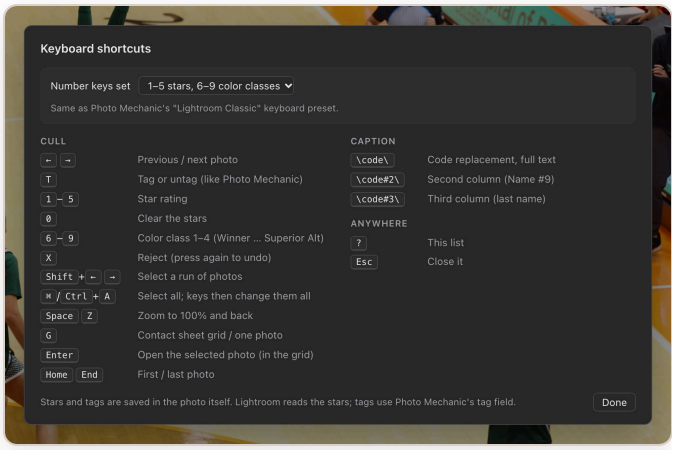

Contact sheet (press G): orange checks are tags, colored bars are color classes, stars are ratings. Three photos are selected.

Select several photos

- **Shift-click** or `Shift` + `←` `→` selects a run. **⌘-click** (Ctrl on Windows) adds one. `⌘` `A` selects all.
- With photos selected, `T`, `X`, stars and colors change **all of them**. `Esc` clears the selection.
- **Copy 3 selected to…** copies just those (RAW, JPEG and sidecars).

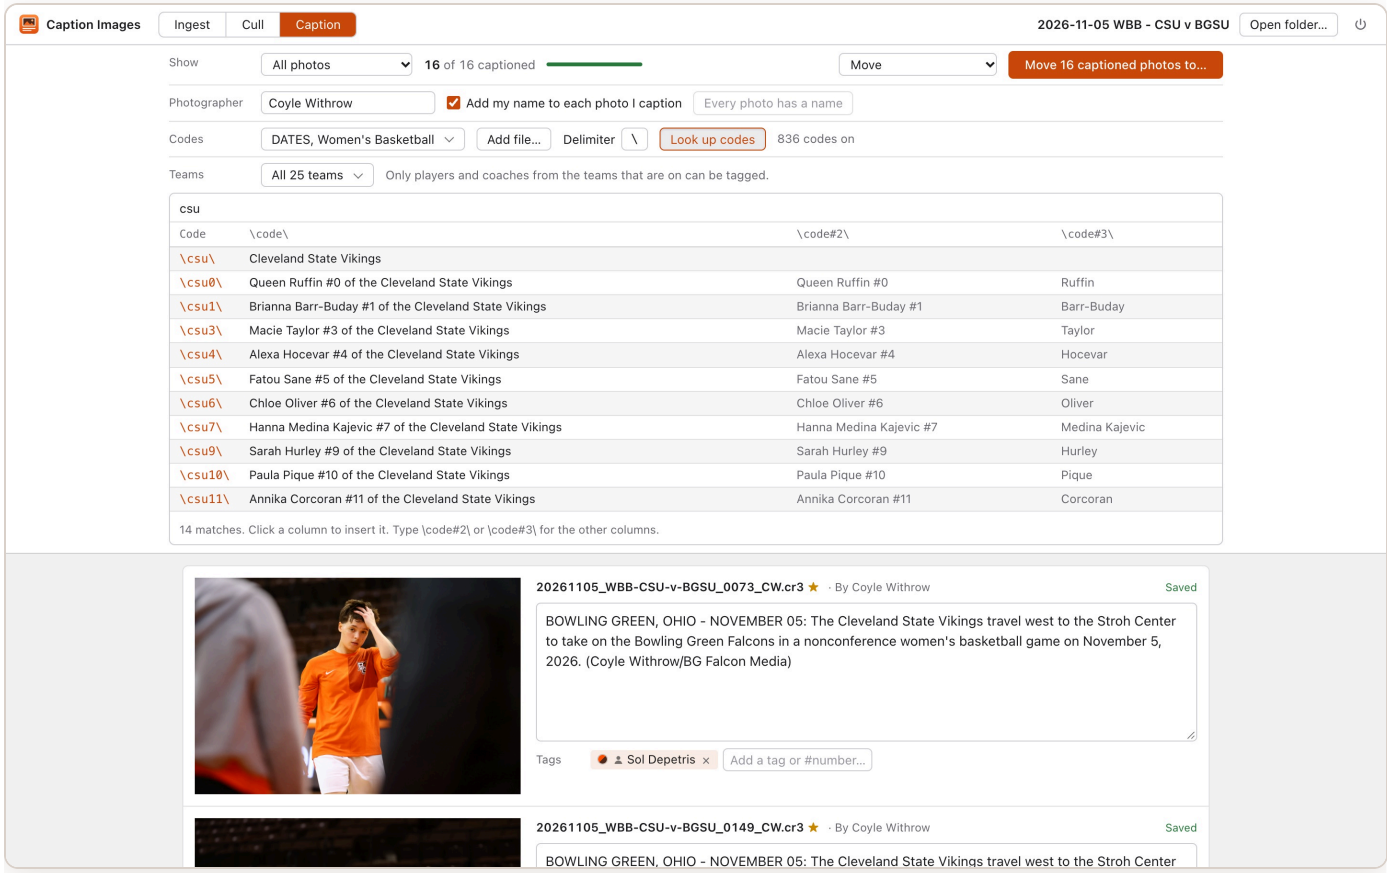

Show only some photos

Show filters the view: not rated yet, ★★★ or more, rejected, **Tagged**, **Not tagged**, or a color class. The Copy button then copies what's showing, e.g. Show: Tagged → *Copy 12 photos to…* for the editor.

Press ? any time for this sheet.

5 Caption with codes

Caption tab with Look up codes open: each column is a different version of the code.

1. Turn on your sport's code file and **DATES** in **Codes** (and **News** for news). Only turn on one sport at a time: some codes mean different things in different sports.
2. Type a code between backslashes and it turns into text as you type: `\csu\` becomes *Cleveland State Vikings*. Captions save on their own.
3. Players have three versions: `\csu10\` full ID, `\csu10#2\` *Paula Pique #10*, `\csu10#3\` *Pique*.
4. Can't remember a code? **Look up codes** and type part of a name. Click a cell to insert it.

Tags

- In a photo's **Tags** box, type a jersey number like **#11** to tag a player, or start typing a keyword from the team list (news, Senior Night, Stroh Center…).
- **Teams** limits player tags to the teams that are on, so you only see tonight's rosters.

Send the finished photos

- The menu next to the big button: **Move**, **Copy**, **Save smaller copies of** (2000 px for the web, 1080 for social…) or **Send to Lightroom**.
- **Show** decides which photos go, e.g. Rated ★ or more.

6 Getty caption style

HOW EVERY CAPTION READS

Every caption follows the same Getty Images pattern. The template builds it for you; when you write one by hand, codes keep it consistent.

BOWLING GREEN, OHIO - NOVEMBER 05: Sol Depetris #11 of the Bowling Green Falcons (left) takes a floater over Paula Pique #10 of the Cleveland State Vikings (right) during a non-conference women's basketball game against the Cleveland State Vikings on November 5, 2026 at the Stroh Center in Bowling Green, Ohio. (Coyle Withrow/BG Falcon Media)

- Dateline: CITY, STATE - MONTH DD:
- Who and what, players as Name #N of the Team
- Which game and against whom
- Date: Month D, YYYY (no zero)
- Venue, then city and state
- Credit: (Name/BG Falcon Media)

Typed with codes

```
\bgdate\ \nov5\: \wbb11\ (left) takes a floater over \csu10\ (right) \dncwbb\ \agst\ \csu\ \nov5d\ \stroh\ \inbg\ \cwbg\
```

That line turns into the caption above, word for word. End every caption with **your** credit code from the list below.

House rules

- **Dateline** in capitals, state spelled out, two-digit day, then a colon: *BOWLING GREEN, OHIO - NOVEMBER 05:*
- **Date in the sentence** without the zero: *on November 5, 2026*. Then the venue (*at the Stroh Center*), then *in Bowling Green, Ohio.*
- **People**: first reference is the full ID, *Sol Depetris #11 of the Bowling Green Falcons*. After that, last name only (\wbb11#3\). Coaches: *Head coach Fred Chmiel of the Bowling Green Falcons*.
- **Officials**: title before the name, *Bowling Green Mayor Mike Aspacher*. Lawmakers: *U.S. Rep. Bob Latta (R-OH)*.
- **Present tense**, active verbs: takes, celebrates, speaks. Say who's where with *(left)*, *(right)*, *(center)*.
- **Hyphenate** non-conference. Write *women's basketball*, *men's hockey*, and so on.
- **Credit** goes last, in parentheses, no "Photo by": *(Coyle Withrow/BG Falcon Media)*.

Everyone's credit code (in DATES, so it always works)

\cwbg\	Coyle Withrow	\sabg\	Samaja Amison	\jfbg\	Julia French
\qdbg\	Quentin Dolengowski	\avtbg\	Ava Thoman	\kkbg\	Kaylee Kunze

QUICK TRANSLATION

PHOTO MECHANIC	CAPTION IMAGES
Ingest + IPTC stationery pad	Ingest tab + Metadata template
Contact sheet	Cull tab, press G
Preview window	Cull tab, one big photo (G again)
T to tag	T to tag (saved in Photo Mechanic's tag field)
Color classes	6–9, or 1–8 with that preset (press ?)
Show tagged only	Show: Tagged
Copy tagged photos	Show: Tagged, then Copy N photos to…
Code replacements \code\	Same codes, same files, in Caption
IPTC info / captions	Caption tab

Where things live

Code Replacements	One .txt file per sport, plus DATES and News. Add players and codes here.
Metadata Templates	Saved templates (.json). Share by sending the file.
Tags.txt	Your keyword list for the Tags box. One tag per line; lines starting with # are notes.
Your photos	JPEGs hold the metadata inside. RAW files get an .xmp sidecar with the same name. Keep them together.

If something goes wrong

A code doesn't change	Turn on its file in Codes. Check the spelling, and that it's between backslashes.
“Unknown code” under a caption	That code isn't in any file that's on. Look it up, or add it to the file.
Card doesn't appear	Unplug and plug it back in, or use Choose a folder instead… and pick the card.
“Updated while it was open”	Click Quit now, then open the app again.
Photos look soft	The big preview is website size (2000 px). Press Z to see full resolution.

KEEPING CODES CURRENT

Rosters, coaches and officials change. The code files are plain text: open them in TextEdit or Notepad, one code per line, a tab between columns. Officials in News were checked Nov. 5, 2026; Ohio's governor and some county offices change in January 2027.
